Cisco Catalyst RADIUS and TACACS+ Configuration

Starting with **2A**, we opened a new teraterm session and reset the whole switch to make sure there are no old vlan configurations present and confirming the switch is clean to use. After this is **Phase A** which entails configuring important information that'll be used alot in this project which is assigning the hostname of the switch and it's ip addresses/subnet masks. We also ping two laptops by assigning manual IP addresses as well.

In **Phase B**, remote configurations using SSH is done. SSH is basically the remote version of a console connection. We create configurations of SSH by creating emergency local admin credentials. We used PuTTy to connect to the switch using the ip address of the switch as the host, port number being 22 and connection type being SSH. Right after, a prompt to use the local admin credentials is shown which is put. Now with an SSH connection established, we will move to **Phase C** which is building the Windows AAA server

AAA is Authentication, Authorization and Accounting and Windows 11 can host both RADIUS and TACACS+. After installing both TekRadius and TACACS.net, we use Powershell to make sure both of these services are running and listening to their respective ports. In **Phase D,** we will add the switch as a RADIUS client using username, password, hostname and authentication port credentials. We will add a test RADIUS user (this is someone trying to access the switch virtually). We will then configure the Cisco switch as a RADIUS client and create a fallback in case RADIUS is unavailable/crashes.

In **Phase E**, we are replicating what we did for RADIUS but now with TACACS+. TACACS.net uses xml files for its authentication, client, and authorization settings. We create backups and make sure the service is running. We will then configure TACACS+ on the switch with a local fallback. For **Phase F**, we will test for EXEC authorization privileges and accounting for session records. We then perform different recovery procedures in case certain situations arise.
